EDUCATION

Hanyang University

Ph.D. Student in Artificial Intelligence (Advisor: Prof. Tae Hyun Kim)

Seoul, South Korea
2022–Present (Expected: Feb. 2027)

Hanyang University

B.S. in Mathematics

Seoul, South Korea
2016–2022

EXPERIENCE

Korea Institute of Science and Technology (KIST)

Research Intern, Center for Artificial Intelligence

Jun. 2021–Dec. 2021
Seoul, South Korea

- Built a real-time multi-modal perception pipeline for the CLOi elderly-care robot: ArcFace face recognition, DeepSORT multi-person tracking, skeleton-based fall detection, and object hazard detection, all integrated as ROS nodes on a single embedded system.
- Fine-tuned the action recognition model on self-collected fall data; applied TensorRT INT8 quantization to achieve real-time inference on a GPU-less Intel NUC, reducing latency by 4× with no accuracy drop.

Healing Paper

Personalized Generative Model Developer

Jul. 2023–Dec. 2023
Seoul, South Korea

- Developed a production-deployed personalized AI profile photo service on Stable Diffusion with per-user LoRA fine-tuning; reduced per-user training time to under 10 minutes from as few as 10 input photos.
- Designed prompt-engineering strategies to suppress identity drift and visual hallucination, measurably improving user preference rates in the live service.

TECHNICAL SKILLS

Programming: Python, C/C++, MATLAB

Frameworks: PyTorch, TensorFlow, OpenCV, Diffusers, HuggingFace

Developer Tools: Git, Linux (Ubuntu), Docker, CUDA, TensorRT, VS Code

Languages: Korean (Native), English (Professional Proficiency)

Research Interests: Computer Vision, Image Restoration, Generative Models (Diffusion / Flow Matching), 3D Scene Understanding

PATENT & AWARDS

KR Patent Application | Variational Bayesian Framework for Learning Transmission-Aware Dehazing Networks

Outstanding Paper Award | IPIU (Image Processing and Image Understanding)

Feb. 2025

GRANTS

NRF Doctoral Student Research Grant | National Research Foundation of Korea (PI)

Sep. 2026–Feb. 2027
